CC Intim 2; Page 81-82; 113pp; English.

CC This amino acid sequence comprises a human Ret ligand (RetL) RetL3

CC Quartial polypeptide sequence, deduced from a partial clone (see

CC (00250) isolated from a human adult heart cDNA library; a

CC full-length RetL3 sequence (see W37463) is also claimed, as well

CC (see W37455-61). Ret ligand is a key component of the Ret

CC (see W37455-61). Ret ligand is a key component of the Ret

CC (see W37455-61). Ret ligand is a key component of the Ret

CC (signalling pathway that specifically interacts with Ret receptor

CC (the Ret tyrosine kinase domain. Vectors containing retL3 DNA and

CC (the Ret tyrosine kinase domain. Vectors containing retL3 DNA and

CC (the RetL3, its soluble variants and fusion proteins with a toxin,

CC (imageable compound or radionuclide. RetL3, optionally when

CC (tissue and survival of damaged tissue, particularly kidney or

CC (tissue and survival of damaged tissue, particularly kidney or

CC (neural tissue. Typical applications are in renal failure,

neural tissue. Typical applications are in renal failure,

neural tissue or prion infections (e.g. meningitis, myelopathy

CC (associated with HIV or Creutzfeldt-Jakob disease), cranial nerve or

spinal cord injury, developmental disorders such as Down's syndrome

CC system (Lyme disease, muscular dystrophy and myasthenla gravis),

CC (see dis, especially tumours.

CC This amino acid sequence comprises mouse Ret ligand (RetL) RetL3, CC deduced from cDNA clones (see Y00249) isolated from an EST CC deduced from cDNA clones (see Y00249) isolated from an EST CC deduced from cDNA clones (see Y00249) isolated from an EST CC deduced from cDNA clones (see Y00249) isolated from an EST CC deficiences (see W37457-60 and W37462-63) are also claimed. RetL1 is component of the Ret signalling pathway that specifically component of the Ret signalling pathway that specifically component of the Ret signalling Ret dimerisation cand/or autophosphorylation of the Ret tyrosine kinase domain. CC and/or autophosphorylation of the Ret tyrosine kinase domain. CC cells transformed or transfected with these vectors are claimed, as component of the retl3, its soluble variants and cells as amethod for production of RetL3, its soluble variants and cc well as a method for production of RetL3, its soluble variants and cc well as amethod for production of RetL3, its soluble variants and cc well as method for production of RetL3, its soluble variants and cc promote growth of new tissue and survival of damaged tissue, components yield the compound or reddimical decompositions are in cc injury, neurodegeneration, motor neurone disease, multiple sclerosis, components with HIV or Creutzfeldt-Jakob disease), cranial nerve or conditions involving the peripheral nervous system (Lyme disease, muscular dystrophy and myasthenia gravis).

CC system (Lyme disease, muscular dystrophy and myasthenia gravis).

CC cells, especially tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 73-74; 113pp; English.

This polypeptide comprises a partial sequence of mouse Ret 15:25.4 RetL3, deduced from EST AA050083 cDNA (see V00256). A full-16:25.4 mouse RetL3 sequence (see W37461) was also obtained. Rat, mouse and human retL1, retL2 and retL3 cDNA sequences (see V00245-51) and encoded polypeptides (see W37457-63) are claimed and can be used in methods for promoting cell growth and improving survival of cells, especially renal or neural cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mouse Ret ligand retL3 partial sequence.

Claim 2; Page 64-66; 113pp; English.
CC Inim 2; Page 64-66; 113pp; English.
CC This maino acid sequence comprises human Ret ligand (RetL) RetL1,
CC deduced from cDNA clones (see v00247) isolated from a human
CC foetal kidney. Rat RetL1 and mouse and human RetL2 and RetL3
CC sequences (see w37457 and w37460-63) are also claimed. The
CC human RetL1 sequence is 93.3% identical to that of rat. Ret ligand
CC is a key component of the Ret signalling pathway that specifically
CC interacts with Ret receptor, triggering Ret dimerisation and/or
CC containing retL1 DNA and prokaryotic or eukaryotic host cells
CC ctansionmed or transfected with these vectors are claimed, as well
CC transformed or transfected with these vectors are claimed, as well
CC transformed or transfected with these vectors are claimed, as well
CC prionally when expressed from vectors in vivo, is used to promote
CC proteins with a toxin, imageable compound or radionuclide. RetL1,
CC prionally when expressed from vectors in vivo, is used to promote
CC proteins with a toxin, imageable compound or radionuclide. RetL1,
CC prionally when expressed from vectors in vivo, is used to promote
CC proteins with a toxin, imageable compound or radionuclide. RetL1,
CC prionally when expressed from vectors in vivo, is used to particularly
CC kidney or neural tissue. Typical applications are in renal failure,
CC nephritis, kidney transplants, toxic or hypoxic injury,
CC kidney or viral or prion infections (e.g. meningitis, myelopathy
CC sociated with HIV or Creutzfeldt-Jakob disease), cranial nerve or
Spinal cord injury, developmental disorders such as Down's syndrome
and cerebral palsy, or conditions involving the peripheral nerveus
CC system (Lyme disease, muscular dystrophy and myasthenia gravis).
CC clis, especially tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             W09744356-A2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                Proceed of the sequence comprises human Ret ligand (Retl) Kolling: Page 69-70; 113pp; English.

CC This amino acid sequence comprises human Ret ligand (Retl) Kolling: This amino acid sequence (see V00248) isolated from a human i.n. CC deduced from a cDNA clone (see V00248) isolated from a human i.n. CC liver library. Rat and human Retll and human and mouse Retll. CC sequences (see W37457-59 and W37461-63) are also claimed. Human CC liver library. Rat and human Retll protein. Retl is a component of the Ret signalling pathway that specifically component of the Ret signalling pathway that specifically component of the Ret tyrosine kinase domain. CC wectors containing retl2 DNA and prokaryotic or eukaryotic host component or transferted with these vectors are claimed, as complete the compound or radionuclide. CC cells transformed or transfected with these vectors are claimed, as composite growth of new tissue and survival of damaged tissue, optionally when expressed from vectors in vivo, is used to compound growth of new tissue and survival of damaged tissue, can failure, nephritis, kidney transplants, toxic or hypoxic compound failure, nephritis, kidney transplants, toxic or hypoxic compound with HIV or Creutzfeldt-Jakob disease, multiple sclerosis, consociated with HIV or Creutzfeldt-Jakob disease, multiple sclerosis, consider such as Down's syndrome can decrebral palsy, or conditions involving the peripheral nervous system (Lyme disease, muscular dystrophy and myasthenia gravis).

CC cells, especially tumours.

CC esting the peripheral nervous sequence 4464 AA.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Description: Perfect Score: >US-08-866-354-38 (1-400) from US08866354.pep 3033

Sequence: 1 MVRPLNPRPLPPVVLMLLLL......PWVPSLFSCTLPLILLLSLW 400

Scoring table: PAM 150 Gap 11

Searched: 74019 segs, 26840295 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot36 1:swissprot

Statistics: Mean 47.118; Variance 74.608; scale 0.632

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC RetL1 (see W37457). Rat and human retl1, and mouse and human retL3 CD DNA sequences are also Claimed (see v00245-47 and v00249-51). CC Vectors containing retL2 DNA and prokaryotic or eukaryotic host CC vectors containing retL2 DNA and prokaryotic or eukaryotic host CC cells transformed or transfected with these vectors are claimed, as CC well as a method for production of RetL2, its soluble variants and CC fusion proteins with a toxin, imageable compound or radionuclide. CC RetL2, optionally when expressed from vectors in vivo, is used to CC promote growth of new tissue and survival of damaged tissue, are in CC retl2 returned by the compound of contains are in CC particularly kidney or neural tissue. Typical applications are in CC injury, neurodegeneration, motor neurone disease, multiple sclerosis, CC associated with HIV or Creutzfeldt-Jakob disease), cranial nerve or Spinal cord injury, developmental disorders such as Down's syndrome CC and cerebral palsy, or conditions involving the peripheral nervous crestem (Lyme disease, muscular dystrophy and myasthenia gravis). CC Fusion proteins are used to deliver toxins etc. to Ret-expressing CC cells, especially tumours.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC Y170a10.rl. It can be used to identify glial cell derived encurotrophic factor receptor (GDNFR) sequences, including human CC variants. Also suitable as probes for GDNFR sequences are another variants of these EST-derived sequences (989805.rl (see T84978), and CC fragments of these EST-derived sequences (see T84980-81) or proteins encoded by them. The invention relates to novel uses of CDNFR alpha (see W27327), its variants and soluble derivatives (extracellular domain), chimeric GDNFR alpha and antibodies which bind to the GDNFR alpha, including agonist and neutralising antiodies, as well as various uses for these molecules. It also crelates to assay systems for detecting ligands to GDNFR alpha, cc systems for studying the physiological role of GDNF, diagnostic conditions for the treatment of GDNF-related conditions, methods for the treatment of GDNF-related and GDNFR alpha-related CC conditions, particularly kidney disease associated with CC Iransgenic and knockout animals are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This DRA sequence comprises a human EST-derived sequence designated ye83h05.rl. It can be used to identify glial cell derived neurotrophic factor receptor (GDNFR) sequences, including human cyaliants. Also suitable as probes for GDNFR sequences are another human EST-derived sequence designated y770al0.rl (see T84979), and fragments of these EST-derived sequences (see T84980-81) or proteins encoded by them. The invention relates to novel uses of GDNFR alpha (see W27327), its variants and soluble derivatives (extracellular domain), chimeric GDNFR alpha and antibodies which bind to the GDNFR alpha, including agonist and neutralising antiodies, as well as various uses for these molecules. It also relates to assay systems for detecting ligands to GDNFR alpha, grantifying molecules homologous to GDNFR alpha, and claimed conditions, particularly kidney disease associated with conditions, particularly kidney disease associated with GTRansgenic and knockout animals are also claimed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PT treat dopaminergic nerve cell disorders, e.g. Parkinson's and PT treat dopaminergic nerve cell disorders, e.g. Parkinson's and PT claim 17; Pages 96-98; 196pp; English.

CC The present sequence encodes the rat glial cell line-derived companiergic nerve cell disorders, e.g. Parkinson's and Alzheimer's CC disease or amyotrophic lateral sclerosis, complications of diabetes CC and Huntington's disease and (optionally in combination with GDNF) CC gliaucoma, retinal degeneration and hearing loss caused by injury to cinner ear sensory neurons. The receptor can also be used to block CC unwanted GDNF activity, analyse GDNF related molecules and cells, preferably transfected ex vivo, can be used to block CC stabilise GDNF in pharmaceutical formulations. Receptor expressing CC cells, preferably transfected ex vivo, can be used to identify by CC implantation, and the use of the receptor CDNA in gene therapy is CC also contemplated. Probes based on the CDNA can be used to identify cC GDNF responsive cells and tissues, e.g. to identify patients who CC would benefit from GDNF therapy, and abnormalities in receptor CC antibodies, oligonucleotides derived from the CDNA. Anti-receptor CC antibodies, oligonucleotides derived from the CDNA and animal complex with the CDNA can be used to study the biological function of GDNF, knockout transgenic animals can be complex that mediates/enhances signal transduction by GDNF, i.e. CC complex that mediates/enhances signal transduction by GDNF, i.e. CC increasing dopamine uptake in dopaminergic cells.

This sequence comprises rat retL1 cDNA (deposited as ATCC 98047)
that codes for the Ret ligand RetL1 (see W37457), a key component
of the Ret signalling pathway. It consists of the insert of clone
#230-5A-86-17 that was isolated from a rat embryonic kidney CDNA
                                                                                                                                                                  New nucleic acid encoding ret receptor ligands and related professervectors, transformed cells and antibodies, used for promoting encountry and improving survival of injured cells, especially renaises
                                                                                                                                                                                                                                                                  (BIOJ ) BIOGEN INC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expression library using a rat Ret/IgG fusion protein. The isolated cDNA was used as a probe to identify human retli cDNA (see W00246-4). retl2 and retl3 cDNAs have also been identified (see W00246-51). Vectors containing retl1 DNA and prokaryotic or eukaryotic host cells transformed or transfected with these vectors are claimed, as well as a method for production of Retl1 its soluble variants and fusion proteins with a toxin, imageable compound or radionuclide. Retl1, optionally when expressed from vectors in vivo, is used to promote growth of new tissue and survival of damaged tissue, particularly kidney or neural tissue. Typical applications are in renal failure, nephritis, kidney transplants, toxic or hypoxic injury, neurodegeneration, motor neurone disease, multiple sclerosis, bacterial, viral or prion infections (e.g. meningitis, myelopathy associated with HIV or creutzfeldt-Jakob disease), cranial nerve or spinal cord injury, developmental disorders such as Down's syndrome and cerebral palsy, or conditions involving the peripheral nervous system (Lyme disease, muscular dystrophy and myasthenia gravis). Fusion proteins are used to deliver toxins etc. to Ret-expressing cells, especially tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 9.6%;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                            CC embryos was generated in a cytomegalovirus-based vector. CNA
CC clones were transfected into COS 7 cells and expression of
CC putative GDNF receptors was detected by binding of iodinated GDNF.
CC A single positive pool was obtained, from which the cDNA clone was
CC isolated. An expression vector containing the cDNA can be used to
CC produce GDNFR alpha in transformed host cells. The invention
CC relates to novel uses of GDNF and its receptor. In particular, it
CC relates to notive rat GDNFR alpha (see W27327), its variants and
CC soluble derivatives (extracellular domain), chimeric GDNFR alpha
CC and nantibodies which bind to the GDNFR alpha, including agonist
CC and neutralising antibodies, as well as various uses for these
CC molecules. It also relates to assay systems for detecting ligands
CC molecules. It also relates to assay systems for detecting ligands
CC molecules. It also relates to assay systems for detecting ligands
CC to GDNFR alpha, systems for studying the physiological role of
CC GDNFR diagnostic techniques for identifying GDNF-related conditions,
CC therapeutic techniques (claimed) for the treatment of GDNF-related
CC and GDNFR alpha-related conditions, particularly kidney disease
CC associated with glomerulonephritis and enteric nervous system
CC related disorders. Transgenic and knockout animals are also
                                                                                                                                                                                                                                                                                                                                                                                                                                  A (GETH) GENEWIECH INC.

TISOlated glial cell derived neurotrophic factor receptor alpha disorders particularly enteric nervous system or kidney disorders of starticularly enteric nervous system or kidney disorders of specific to disorders, particularly enteric nervous system or kidney disorders of specific to disorders of the claim 23; Page 74-77; 100pp; English.

Claim 23; Page 74-77; 100pp; English cell derived neurotrophic factor receptor alpha (GDNFR alpha) (see W27327), a novel correction that is a ligand-binding component of the receptor system for GDNF. It was isolated by expression cloning.

C A cDNA library obtained from ventral middlersin tissue of E14 rat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       T84975;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rat glial cell derived neurotrophic factor receptor alpha cDNA. CI The present sequence encodes the human glial cell line-derived CC neurotrophic factor (GDNF) receptor, which can be used to treat CC dopaminergic nerve cell disorders, e.g. warkinson's and Alzhelmer's CC disease or amyotrophic lateral sclerosis, complications of diabetes CC and Huntington's disease and (optionally in combination with GDNF) CC glaucoma, rethal degeneration and hearing loss caused by injury to cinner ear sensory neurons. The receptor can also be used to block CC unwanted GDNF activity, analyse GDNF related molecules and cells, preferably transfected ex vivo, can be used to block CC implantation, and the use of the receptor cDNA in gene therapy is CC also contemplated. Probes based on the CDNA can be used to identify patients with CC would benefit from GDNF therapy, and abnormalities in receptor CC expression, and to isolate molecules that form a complex with the CDNA or are homologous/cross-reactive with the CDNA. Anti-receptor antibodies, oligonucleotides derived from the cDNA and animals can be used to detect GDNF dependent neurons or processes and the antibody Cc can be used in immunoassays for the receptor. The receptor binds CC can be used in immunoassays for the receptor. The receptor binds CC complex that mediates/enhances signal transduction by GDNF, i.e. CC increasing dopamine uptake in dopaminergic cells.

This DNA sequence comprises a fragment of a human EST-derived sequence designated ye83h05.rl (see T8478). It can be used as sequence designated ye83h05.rl (see T8478). It can be used as probe to identify glial cell derived neurotrophic factor receptor (GDNF) sequences, including human variants. The invention relates to novel uses of GDNF and its receptor. In particular, it relates to rat GDNFR alpha (see w27327), its variants and soluble derivatives (extracellular domain), chimeric GDNFR alpha and antibodies which bind to the GDNFR alpha, including agonist and neutralising antiodies, as well as various uses for these molecules. It also relates to assay systems for detecting ligands to GDNFR alpha, systems for studying the physiological role of GDNF, diagnostic techniques for identifying molecules homologous to GDNFR alpha, methods for identifying molecules homologous to GDNFR alpha, and claimed methods for the treatment of GDNF-related and GDNFR alpha-related conditions, particularly kidney disease associated with Transgenic and knockout animals are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1154

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                    This DNA sequence comprises a fragment of a human EST-derived CC sequence designated y170al0.rl (see T8479). It can be used as ca probe to identify glial cell derived neurotrophic factor receptor CC (GDNFR) sequences, including human variants. The invention relates to novel uses of GDNF and its receptor. In particular, it relates ct or at GDNFR alpha (see W27327), its variants and soluble derivatives (extracellular domain), chimeric GDNFR alpha and antibodies which cc bind to the GDNFR alpha, including agonist and neutralising antiodies, as well as various uses for these molecules. It also crelates to assay systems for detecting ligands to GDNFR alpha, correct dentifying molecules homologous to GDNF alpha, and claimed conditions, particularly kidney disease associated with glomerulonephritis and enteric nervous system related disproduct. CC conditions, particularly kidney disease associated with glomerulonephritis and enteric nervous system related disproduct. Sequence 201 BP; 41 A; 78 C; 46 G; 36 T;

                                                                                                                                                                                                                                                                                                                                                                                       Klein RD, Moore MW, Rosenthal A, Ryan AM;
WPI; 97-470819/43.
Isolated glial cell derived neurotrophic factor receptor alpha
useful to develop products to diagnose and treat associated
disorders, particularly enteric nervous system or kidney disord
Example 1; Page 61; 100pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human EST-derived sequence y170a10.rl fragment.
Glial cell derived neurotrophic factor receptor alpha; GDNFR alpha;
GDNF; human; kidney disease; glomerulonephritis; therapy; EST;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1324

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                           This sequence comprises a partial CDNA for human Ret ligand (RetL) created from a human embryonic kidney cDNA library using rat retLl cDNA (see v00245) as probe. A full-length sequence (see v00247) for human retLl cDNA has also been obtained, as well as containing retLl DNA and prokaryotic or eukaryotic host cells containing retLl DNA and prokaryotic or eukaryotic host cells transformed or transfected with these vectors are claimed, as well as a method for production of RetLl, its soluble variants and custom proteins with a toxin, imageable compound or radionuclide. RetLl, optionally when expressed from vectors in vivo, is used to promote growth of new tissue and survival of damaged tissue, perficularly kidney or neural tissue. Typical applications are in crenal failure, nephritis, kidney transplants, toxic or hypoxic myelopathy associated with HIV or Creutzfeldt-Jakob disease), cranial nerve or spinal cord injury, developmental disorders such as Down's syndrome and cerebral palsy, or conditions involving the peripheral nervous system (Lyme disease, muscular dystrophy and cut. to Ret-expressing cells, especially tumours.

Retti (see W37459), a key component of the Ret signaling pathway. CC cDNA using primers based on a partial human retti cDNA (see V00246). Rat retti and mouse and human retti cDNA (see V00246). Rat retti and mouse and human retti cDNA (see CC V00246). Rat retti and mouse and human retti cDNA (see CC containing retti DNA and prokaryotic or extil cDNA. Vectors containing retti DNA and prokaryotic or exaryotic host cells transformed or transfected with these vectors are claimed, as well cas a method for production of Retti, its soluble variants and component of new tissue and survival of damaged tissue, potionally when expressed from vectors in vivo, is used to promote growth of new tissue and survival of damaged tissue, containing kidney or neural tissue. Typical applications are in cranal failure, nephritis, kidney transplants, toxic or hypoxic conjury, neurodegeneration, motor neurone disease, multiple called the protest of sectors is bacterial, viral or prion infections (e.g. meningitis, conjury associated with HIV or Creutzfeldt-Jakob disease), conjury associated with HIV or Creutzfeldt-Jakob disease), see Conjury and cerebral palsy, or conditions involving the componental disorders such as Down's syndrome and cerebral palsy, or conditions involving the componental disorders. Fusion proteins are used to deliver toxins cetc. to Ret-expressing cells, especially tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ruseful to develop products to diagnose and treat associated disorders, particularly enteric nervous system or kidney disciplish.

Example 1; Page 60-61; 100pp; English.

This cDNA sequence comprises the 3' end of mouse full-length glal cell derived neurotrophic factor receptor alpha (GDNFR alpha; CSC 91sal cell derived neurotrophic factor receptor alpha (GDNFR alpha; CSC 91sal cell derived neurotrophic factor receptor alpha (GDNFR alpha; CSC 10se 26 was isolated from a mouse cDNA library using rat GDNFR alpha cDNA (see T84975) as probe. The invention relates to notice rat GDNFR alpha (see T84975), its variants and soluble rat GDNFR alpha (see W27327), its variants and soluble to native rat GDNFR alpha (see W27327), its variants and soluble derivatives (extracellular domain), chimneric GDNFR alpha and antibodies which bind to the GDNFR alpha, including agonist and neutralising antibodies, as well as various uses for these molecules. It also relates to assay systems for detecting ligands to GDNFR alpha, systems for studying the physiological role of GDNF diagnostic techniques for identifying GDNF-related conditions, methods for identifying molecules homologous to GDNFR alpha, end alpha, end of the related conditions, particularly kidney discussional conditions, particularly kidney discussional discussions associated with glomerulonephritis and enteric nervous systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                        protection of polymorphic genetic markers of the form (dC-dA)n(dG-dT)n - using novel nucleic acid mols. as primers plsclosure; Column 9-10; 186pp; English.

The invention relates to the isolation of polymorphic repeat sequences having the sequence (dC-dA)n.(dC-dT)n which can be used to detect the repeats, especially for use in e.g paternity or maternity the sequence commercial animal or plant breeding or pedigree analysis. Clones containing the repeat sequences were isolated by hybridisation of chromosome-specific phage libraries with a synthetic poly(dC-dA).(discontinuous) over 100 repeat blocks were isolated. The inserts from the containing the repeat sequences were isolated. The inserts from the containing the sequence series with a synthetic poly(dC-dA). (discontinuous) over 100 repeat blocks were isolated. The inserts from the containing the formula are shown in T65704-797. This reposit sequence has been determined are shown in T65704-797. This reposit sequence having the formula: (AC)8AG(AC)3AG(AC)2ATCAC(TC)6T.
                                                                                                                                                                            Query Match

Claim 7; Page 122 and Fig 19(1-3); 183pp; English.
The mouse gene equivalent to the human Y-Located gene defined by py53.3 (Q20684), is referred to as Sex-determining Region of the Y-chromosome (Sry) (formerly (mating type box y) Mty).
The mouse Sry is expressed in male genital ridge, at the time that sex determination occurs, and adult testis see also Q20680-81, Q20684-87, Q22530-31, Q22535-36 and Q22560-67.

score greater than or equal and is derived by analysis of Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being predicted by the p greater than or equal to the score of the result being derived by analysis of the total score distribution printed,

Claim 2; Page 69-70; 113pp; English.
This amino acid sequence comprises human Ret ligand (RetL) RetL2;
deduced from a cDNA clone (see V00248) isolated from a human foctor
liver library. Rat and human RetL1, and human and mouse RetL3
sequences (see W37457-59 and W37461-63) are also claimed. Human
RetL2 is 49.1% identical to human RetL1 protein. RetL is a
RetL2 is 49.1% lentical to human RetL1 protein. RetL is a
Rey component of the Ret signalling pathway that specifically
interacts with Ret receptor protein, triggering Ret dimerisation
and/or autophosphorylation of the Ret tyrosine kinase domain
vectors containing retL2 DNA and prokaryotic or eukaryotic host
cells transformed or transfected with these vectors are claimed, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human Ret ligand RetL2.

Typical applications are in renal failure, nephritis, kidney transplants, toxic or hypoxic injury, neurodegeneration, motor neurone disease, multiple sclerosis, bacterial, viral or prion infections (e.g. meningitis, myelopathy associated with HIV or Creutzfeldt-Jakob disease), cranial nerve or spinal cord injury, developmental disorders such as Down's syndrome and cerebral palsy, or conditions involving the peripheral nervous system (Lyme disease, muscular dystrophy and myasthenia gravis). Fusion proteins are used to deliver toxins etc. to Ret-expressing securace 464.11 tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 432 gsnkvikpnsgpsrarpsaaltvisvimiklai 464

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC The present sequence is the rat gillal cell line-derived CC neurotrophic factor (GDNR) receptor, which can be used to treat CC dopaminergic nerve cell disorders, e.g. parkinson's and Alzhelmer's CC disease or amyotrophic lateral sclerosis, complications of disbetes CC disease or amyotrophic lateral sclerosis, complications of disbetes CC and Huntington's disease and (optionally in combination with GDNF) CC diner ear sensory neurons. The receptor can also be used to block CC unwanted GDNF activity, analyse GDNF related molecules and cells, preferably transfected ex vivo, can be used similarly by CC diner responsive cells and the use of the receptor CDNA in gene therapy is CC also contemplated. Probes based on the CDNA can be used to identify could benefit from GDNF therapy, and abnormalities in receptor CC expression, and to isolate molecules that form a complex with the CC would benefit of solate molecules that form the CDNA, and animal condities, oligonucleotides derived from the CDNA. Anti-receptor CC expression, and to isolate molecules that form the CDNA, and animal condities, oligonucleotides derived from the CDNA. Anti-receptor CC antibodies, oligonucleotides derived from the CDNA, and animal condities, oligonucleotides derived from the CDNA, and animal condities of increasing dopamine uptake in dopaminergic cells.

CC can be used in immunoassays for the receptor. The receptor binds complex that mediates/enhances signal transduction by GDNF, i.e. CC increasing dopamine uptake in dopaminergic cells.

Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Tabular output not generated. Mon Mar 8 14:30:24 1999; MasPar time 16.69 Seconds 739.585 Million cell updates/sec

Title:

Description: Perfect Score: Sequence: >US-08-866-354-40 (1-460) from US08866354.pep 3343 1 MLVFPSHYPDETLRSLASPS.....RARLSAALTALPLLMLTLAL 460

Scoring table: PAM 150 Gap 11

Searched: 74019 segs, 26840295 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot36 1:swissprot

Statistics: Mean 48.125; Variance 69.852; scale 0.689

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
